Team Approach

Question 1: How well do the team members understand the problem?

All team members understood the requirements and scope of the project
and successfully worked together to accomplish the task at hand.

Question 2: How are the project tasks achieved?

All project tasks were divided equally amongst the team members and all
members completed their tasks successfully.

Question 3: How did the team approach solving a problem?

If a team member had any problems it was solved by joining a google meet and working together
to figure out the best way to solve the problem.

Question 4: What approach was taken to solve the problem?

Collaboration and problem solving techniques were used as a group over google meets to solve
any problems.

Overall Comments on team approach:

Overall the team worked well together and successfully completed the project. The team enjoyed
working together.

Team Coordination of Task Responsibilities

Question 1: How actively did team members take interest and support in terms of individual member responsibilities?

The team members collaborated effectively by dividing the work and then making sure to call to see if the tasks and responsibilities were accomplished. All team members were actively involved throughout the project and made sure to collaborate and communicate where needed.

Question 2: How well did the completion of tasks require active interchanges and sharing of information among members?

The sharing of tasks and information was a common practice between the team. Due to this we were able to share a google drive and get on a google meet at least twice weekly to share the information through google drive and collaborate on ideas. We were able to actively accomplish the tasks assigned.

Question 3: How well did the assignment of tasks to individuals match their expertise?

The assignment of the tasks matched each individual's expertise effectively. An example of this would be one of the team members working on the prototype as she had an expertise in the software. Another team member was able to work on the requirement diagrams and the planning. The other team member was able to work with Swift to create the iOS application.

Question 4: How well did the team coordinate individual task assignments?

Daily meetings were held to coordinate and help each other with task assignments. We listed out what needed to be accomplished and all the requirements for each task, periodically updating each other on the progress. Each team member not only completed their individual tasks but contributed with other team members tasks as well.

Overall Comments on team coordination of task responsibilities:

The team coordination of tasks and responsibilities was fair and efficient. The team was able to allocate tasks according to the team members expertise. Every team member contributed equally to the project by accomplishing their task and responsibilities.
